ESW SQUARE DRIVE TORQUE WRENCHES

EAGLE PRO®

The ESW series torque wrenches were designed with accuracy, reliability, and ease of use in mind. A fully positionable, 360° rotating reaction arm allows you to put the torque wrench head where you need it. The multi-port swiveling inlet keeps the hydraulic hoses out of your way while you work. Quick release square drive allows you to switch from tightening and loosening operations without any special tools. Compact, light-weight, high strength Aluminum alloy construction makes these wrenches a breeze to carry to the job site. Designed using 3D CAD modeling software, the ESW torque wrenches will provide consistent torque within +/- 3%.

Fast and efficient operation.
35° rotation angle and fast return stroke

Quick release square drive made from high strength, heat treated steel

Be sure to select the correct torque wrench for your application. Loosening torque requires approximately 250% more than tightening torque

EHW LOW PROFILE TORQUE WRENCHES

EAGLE PRO®

The EHW series torque wrenches feature a compact, light weight, aluminum alloy construction that allows you to get into those tight areas where other torque wrenches won't fit. Simple, tool free design, makes changing the link on the job site easy. The multi-port swiveling inlet keeps the hydraulic hoses out of your way while you work. Designed using 3D CAD modeling software, the EHW torque wrenches will provide consistent torque within +/- 3%.

Swiveling inlet port rotates 360 degrees

Fast and efficient operation.
35° rotation angle and fast return stroke

Simple, tool free design for fast link changes on the job site

High strength, heat treated, steel reducers - custom sizes available if needed
